

The "Bola" Hockey Ball Machine Fundraiser

Having used one of these machines recently, I believe that the advantages of using one of these machines warrant a purchase. Accurate, consistent drills for ALL players - goalie drills, receiving passes on the run, receiving overheads - the list is as broad as the imagination...

Now, how about some help with the funds, I'll put up the first \$100. Once the purchase price has been reached, the fundraising will close. Andy Reynolds.

Unlike O'50 hockey players, the BOLA never tires or has hamstring issues. It will feed the perfect pass or shot at goal time after time. For all players, goalkeepers and coaches, frustration at poor passing shooting or feeding during training sessions can be a thing of the past. With the BOLA Hockey Machine, everyone can concentrate on quality practice and make maximum use of the available time. Training sessions with the BOLA are instantly more productive.

The latest model Hockey machine benefits from a sophisticated new speed control package which is extremely energy efficient and offers much greater battery operation time so your training sessions with no mains power will tire all but the most persistent of practisers.

ROELANT OLTMANS - Olympic Games winning Coach to the Dutch National Mens team "Given the intensity of match conditions, where a player may only get one chance to get something right - BOLA can be the difference between gold and silver!"

KERRY HORGAN - Hockey Coach, Kent State University, Ohio, USA "The hockey ball machine is a great tool for the training of goalkeepers as well as field players. Coaches all over America are so excited when they see my team using this machine! It's a great tool."

MALCOM WOOD - Welsh Senior Men's Hockey Coach "The BOLA hockey machines is a great tool for learning. It would be impossible to generate such an accurate and consistent delivery manually."

PETER MOORES - Lancashire CCC Head Coach (Ex-England & Sussex CCC Head Coach) "The BOLA Hockey Machine and Gimbalbed Turntable allows the Coach to replicate the correct trajectory of the ball at speeds realistic to match conditions. The ability to be able to monitor the speed and direction of the ball is a considerable advantage when it comes to measuring improvement over a period of time."

Increased accuracy, increased safety

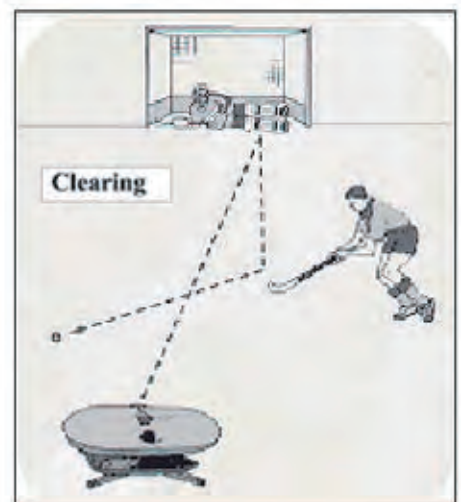

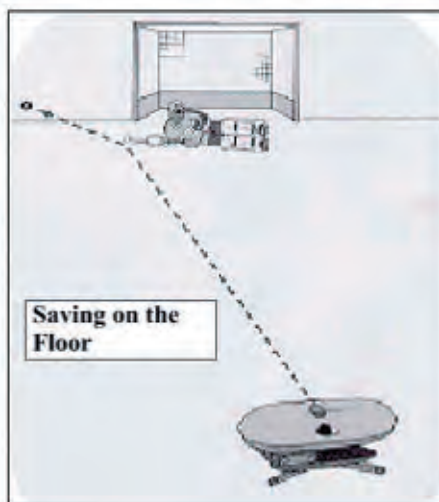

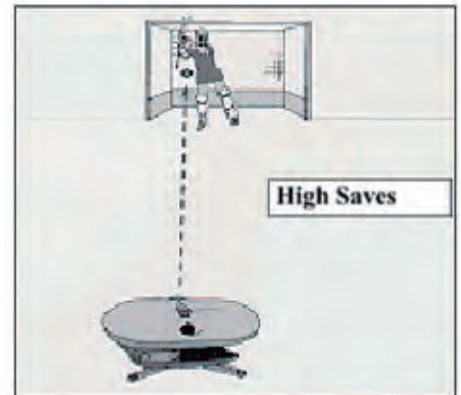

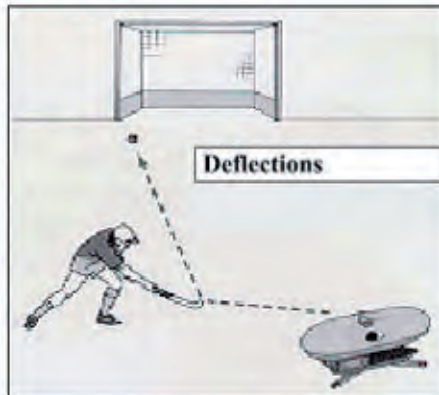

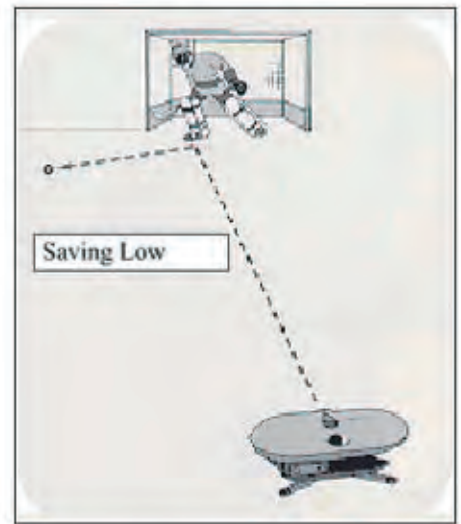

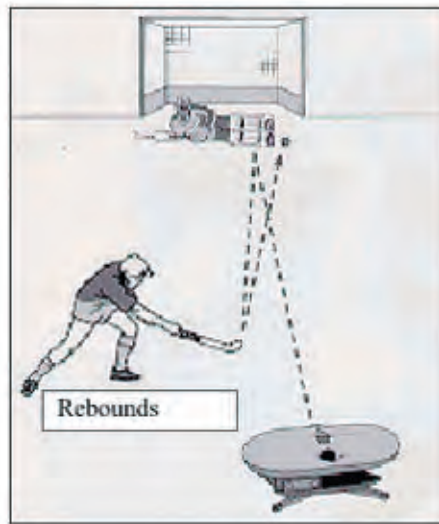

The BOLA Hockey Machine can place the ball exactly where you intend. No more accidental undercuts, no surprise injuries. Whether you want a precision cross or a 60 yard aerial ball, the BOLA provides it.

Internationally used and recognised

The BOLA machine has become an essential part of the training sessions for many of the world's national hockey teams. It issued in Holland as a key training aid for the national squad keepers and players. Many of the Dutch national league teams have now invested in the BOLA Hockey Machine. National squads in Great Britain, Australia and India and an ever increasing number of Hockey clubs all over the world are also using the BOLA in their training programmes.

Portability

The BOLA Hockey Machine is 12 volt battery operated so it can be used anywhere. Pick it up and put it down where you need it. Each battery charge lasts up to seven hours of continuous use with an overnight recharge from a car battery charger. There is also a mains option available for indoor training sessions.

Donations between \$20 and \$100 are required
